

Aims and Objectives

We aim to recruit and train the best young clinical and non-clinical scientists with an interest in global health research, to provide them with the support, training and academic environment they need to develop into independent researchers, and to facilitate their academic and clinical career progression;

Our key partner institutions in Africa and Asia are all regional centres of excellence in biomedical research, with whom we have been collaborating for many years on research and capacity building projects. We aim to expand our programme of training, mentorship and support for clinical and non-clinical scientists in our key partner institutions through regional short courses, many of them based on distance learning materials developed at our partner institutions in London; through joint mentorship and supervision of PhD and post-doctoral students; and by strengthening infrastructure in these institutions. Our goal is to train a cadre of outstanding scientists in our key partner institutions who will be able to compete successfully for international research funding.
